

DRAFT Data Sheet E – Results of Internal Review Committee

Date of Review/Recommendation: April 21, 2009

Water Body Under Evaluation:

Water Body ID #: 2402
Name: Sugar Camp Hollow (Class C)
Length of Segment: 2.5 miles
County(ies): Barry

Use Attainability Analysis (UAA) Study:

UAA ID #: 0909
Submitter: Olsson Associates
Date(s) Conducted: April 4, 2008
Date Received: May 30, 2008
Use Evaluated: Whole Body Contact Recreation (WBCR)

UAA Criteria Evaluated:

- ☐ 1-Natural Pollutant Sources.
- ☒ 2-Natural, Ephemeral, Intermittent or Low-Flow Condition.
- ☐ 3-Non-Remedial, Human Caused Condition.
- ☐ 4-Hydrologic Modifications.
- ☐ 5-Natural Physical Features.
- ☐ 6-Substantial, Widespread Social and Economic Impact.

Use Determination & Recommendation:

Has the use existed since November 28, 1975? ☐ Yes ☐ No ☒ Unknown

Comments: The UAA survey was conducted in April 2008 and no WBCR was observed. No interviews were conducted during the survey, and no comments were received. A fire pit and campground were documented adjacent to the stream at site 1.

Is the evaluated use attainable? ☐ Yes ☒ No

Comments: The stream did not meet the depth criteria at any of the 3 sites evaluated, nor was there any evidence of existing use. The findings of this UAA are consistent with that of the 2005 UAA in which the WBCR use designation was removed. Due to evidence of secondary contact (campground), the committee recommends Secondary Contact Recreation be assigned.

Committee Recommendation:

- ☐ Add Use
- ☐ Retain Use
- ☒ Remove Use
- ☐ Modify Use
- ☐ Inconclusive

Committee Members: Anne Peery, Bill Whipps, Mike Kruse
